Human reactive-only TIED | 0–1.8 s RTs | delay prior 0–300 ms | choices ignored

ASL 20 cd/m² — RT-only model — Data steps
ASL 40 cd/m²

Condition = RT | 0 ≤ RT_s ≤ 1.8 s | delay prior 0–300 ms
RT-only: sum left/right densities; response side ignored | all curves conditional on the fitted RT window
Arithmetic physical posterior means | pooled raw trials; actual stimulus frequencies | variational approximation
Control: 81,000 steps; 25-window check passed | ASD: 65,000 steps; 25-window check passed
Causal delay limits from retained RTs: Control <111.190 ms; ASD <181.611 ms
