Total SVI updates (thousands)
ASD | Full loss history
1,000-step mean negative ELBO
Total SVI updates (thousands)
ASD | Final 100,000 updates
1,000-step mean negative ELBO
Total SVI updates (thousands)
ASD | Strict post-best counter
Windows since lower best loss
Total SVI updates (thousands)
Gray dashed: original endpoint | black dotted: selected best loss checkpoint / required 25 follow-up windows
Checkpoint selection uses stochastic 1,000-step means; this establishes the specified follow-up, not a global optimum.
