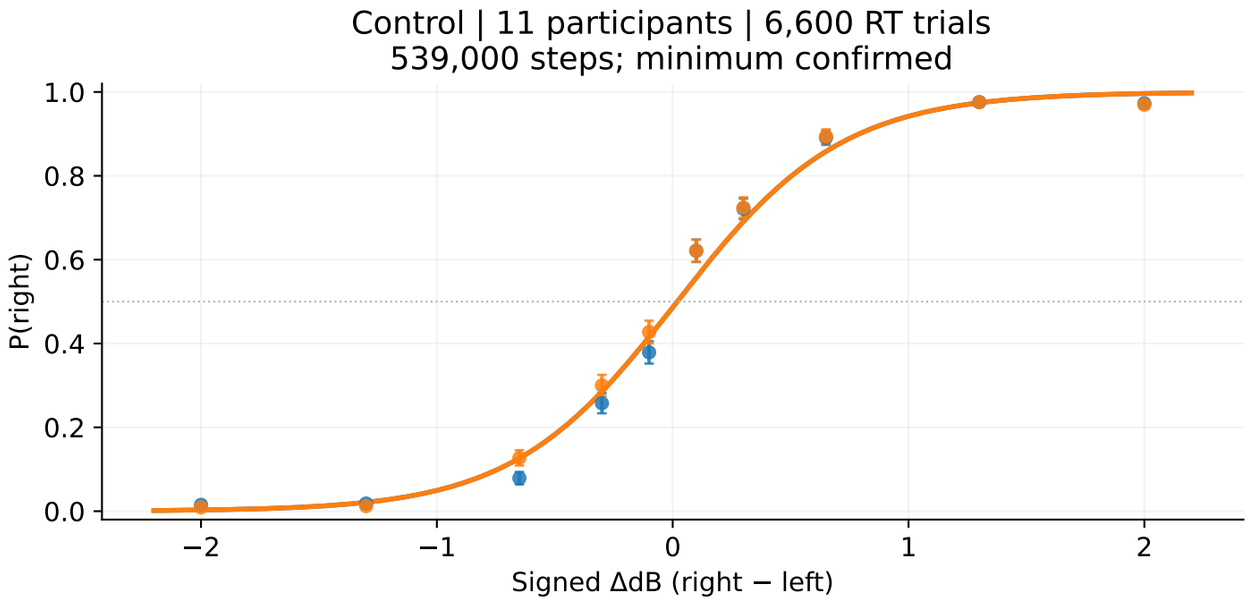
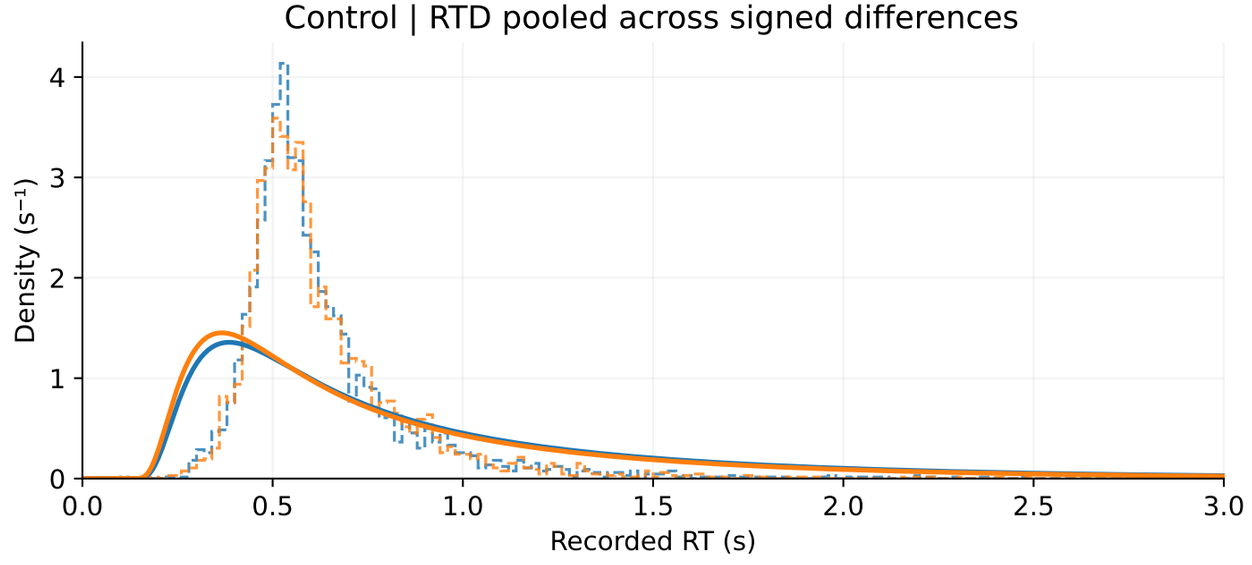
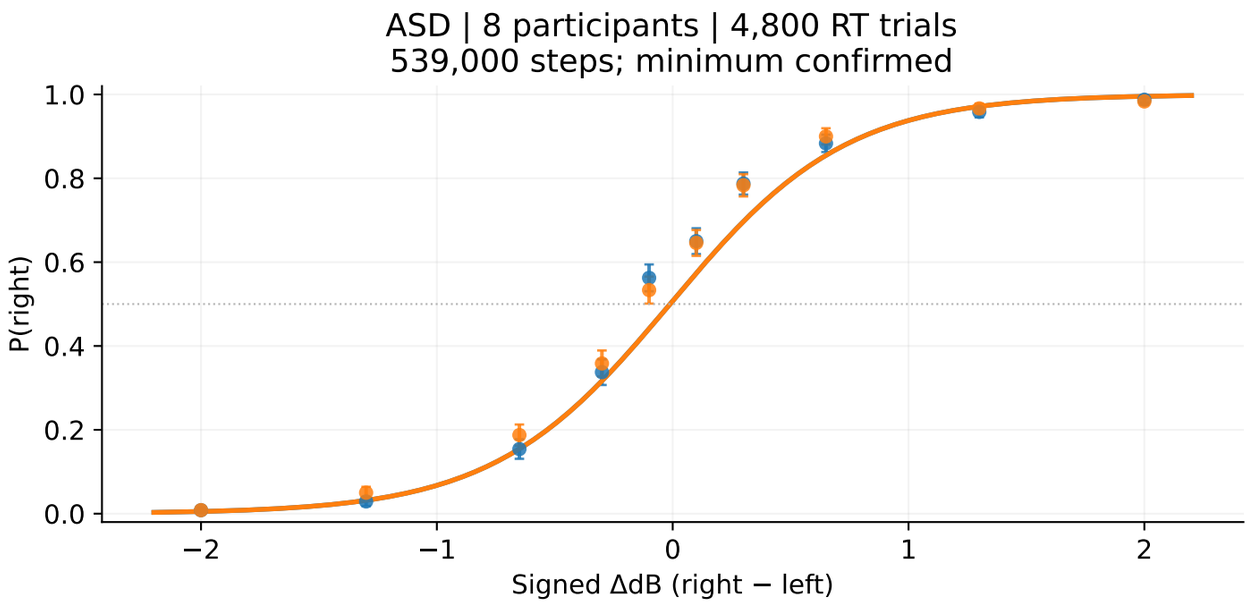
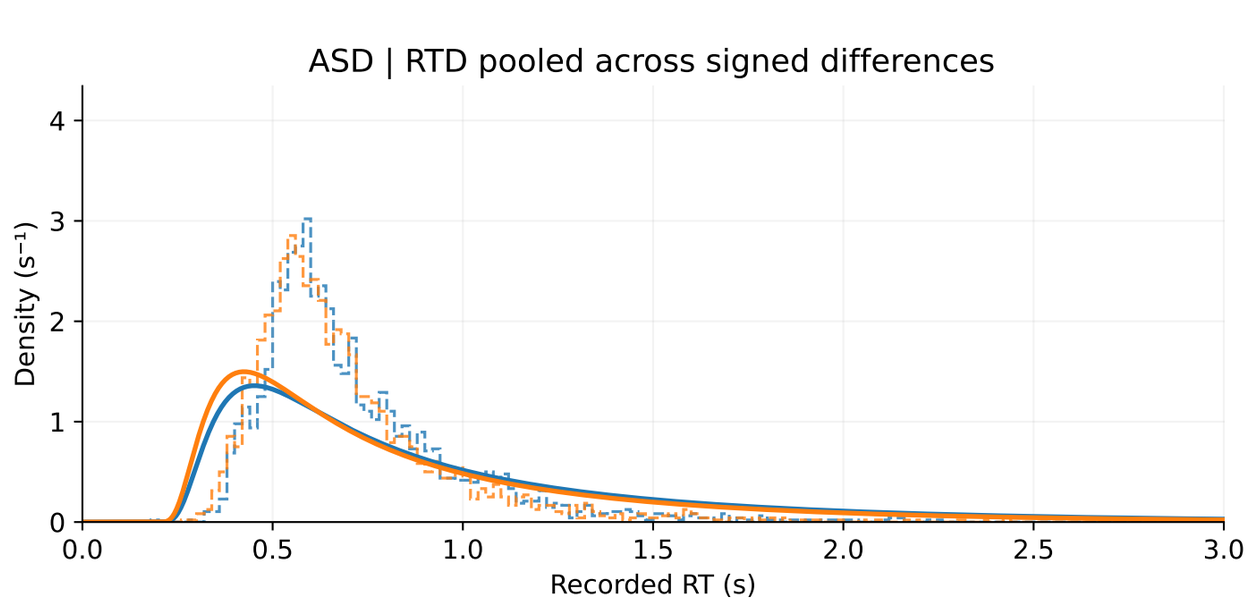
Human RT | reactive-only vanilla/IPL TIED | one model per group

ASL 20 cd/m² · ASL 40 cd/m² · Model · Data RTD









Condition = RT | all retained correct and incorrect choices | pooled raw trials and sessions
Solid: model at arithmetic posterior means; steps/points: data | joint RT + choice fit, conditional on 0–3 s
Five shared parameters per group | variational approximation; pooled uncertainty excludes participant variability
