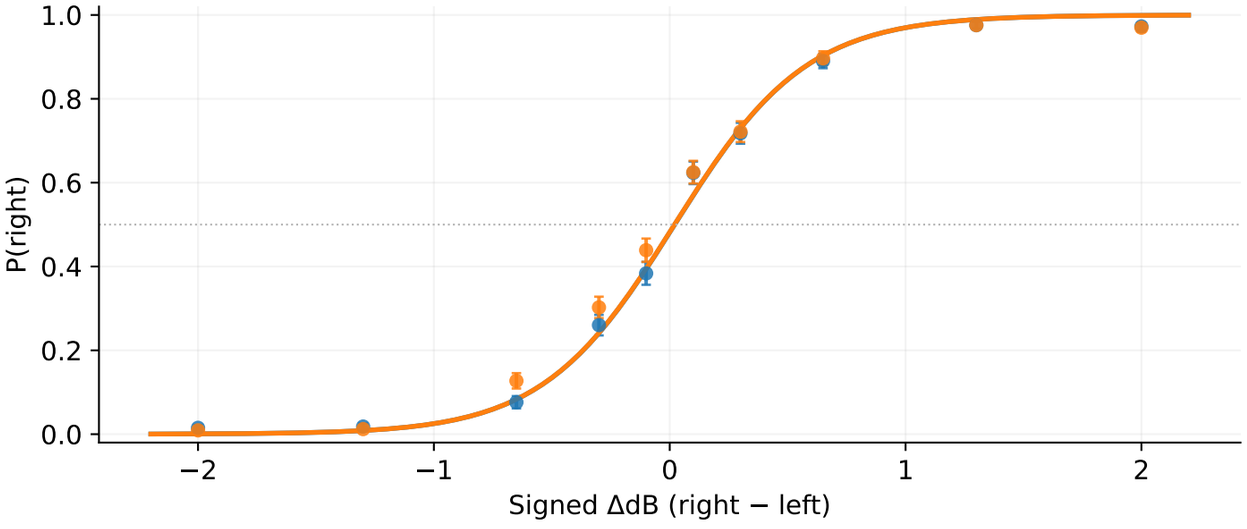
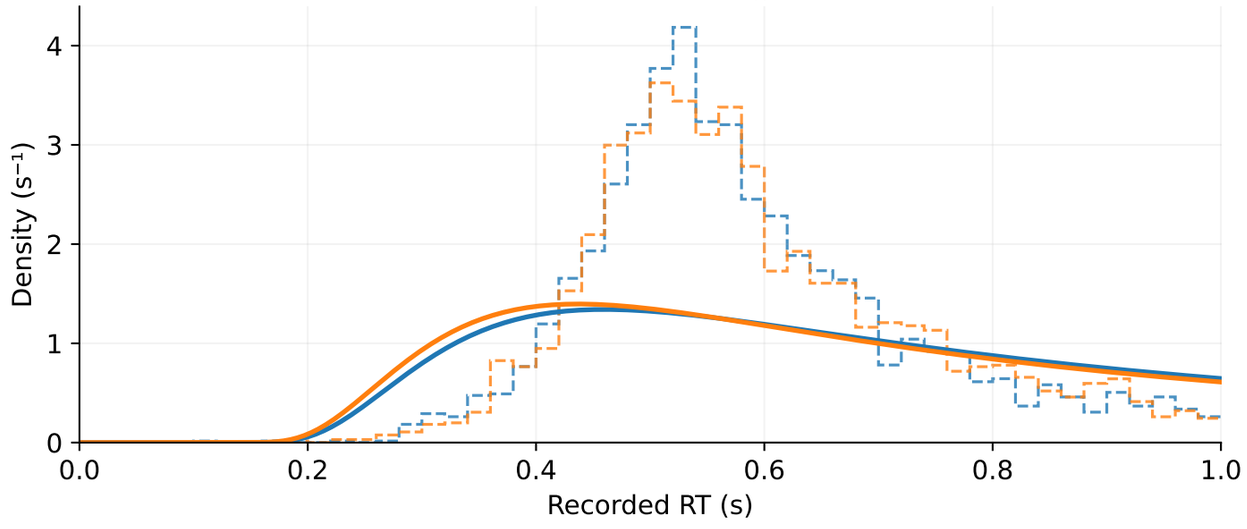
Human RT ≤ 1.5 s | reactive-only vanilla/IPL TIED | one model per group

ASL 20 cd/m² | ASL 40 cd/m² | Model | Data RTD

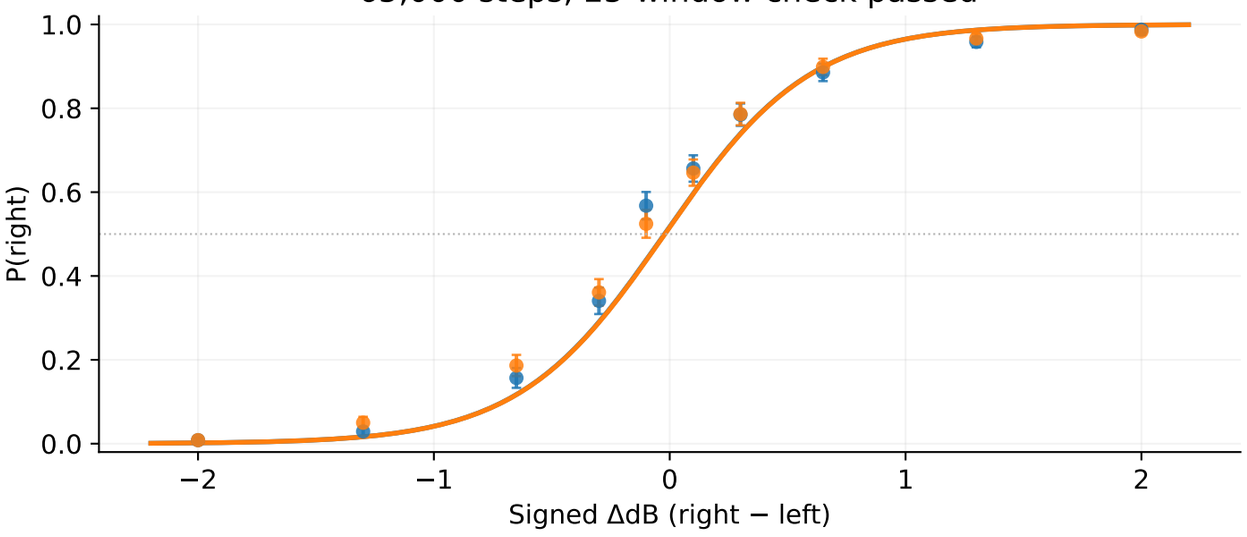
Control | 11 participants | 6,531 RT trials
301,000 steps; 25-window check passed



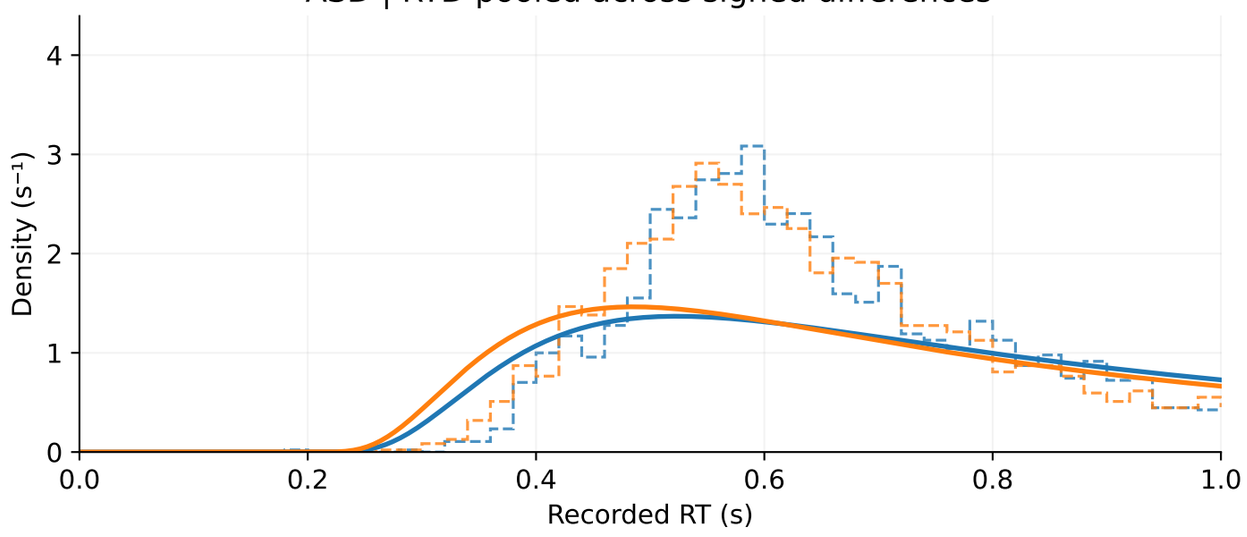
Control | RTD pooled across signed differences



ASD | 8 participants | 4,704 RT trials
65,000 steps; 25-window check passed



ASD | RTD pooled across signed differences



Condition = RT, RT ≤ 1.5 s | retained correct and incorrect choices | pooled raw trials and sessions
Solid: model at arithmetic posterior means; steps/points: data | joint RT + choice fit, conditional on 0–1.5 s
Five shared parameters per group | variational approximation; pooled uncertainty excludes participant variability
