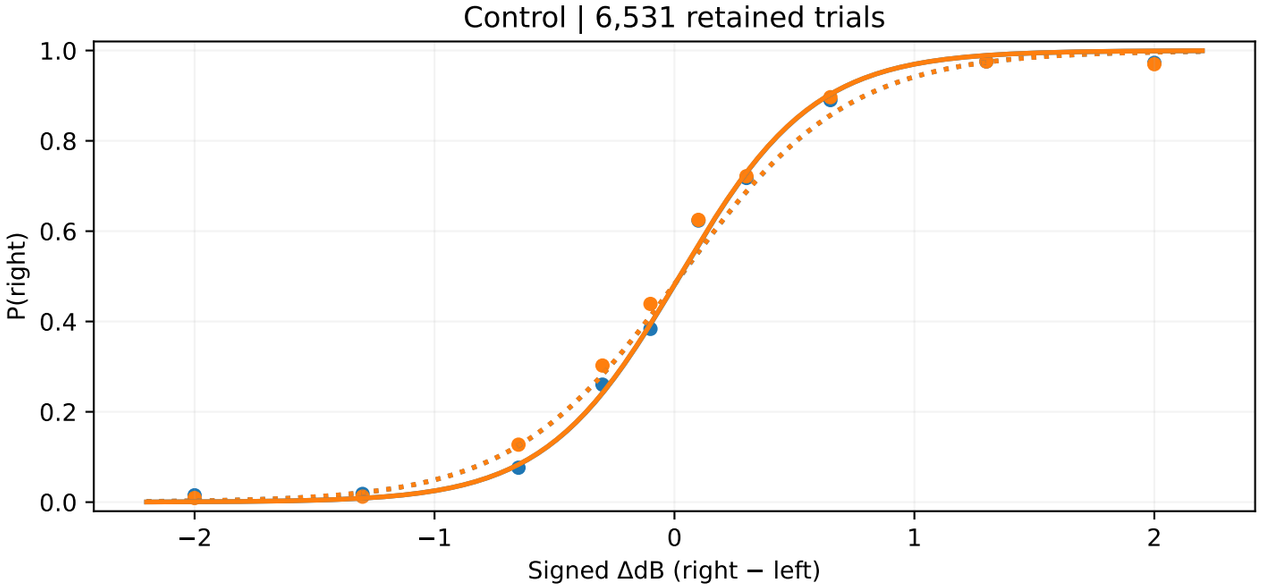
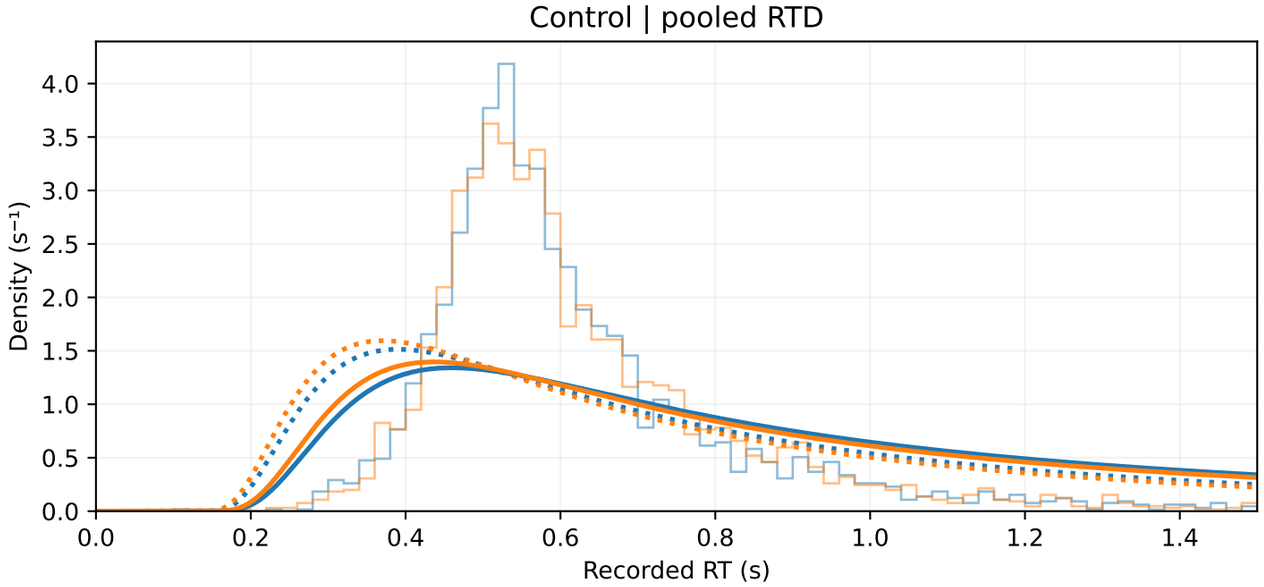
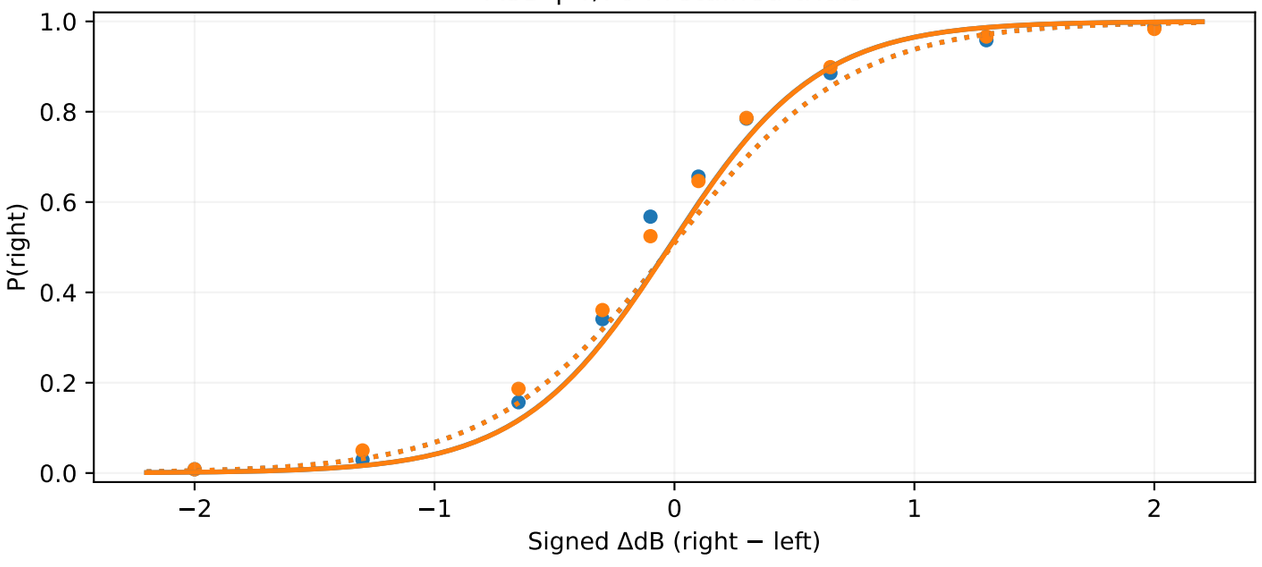
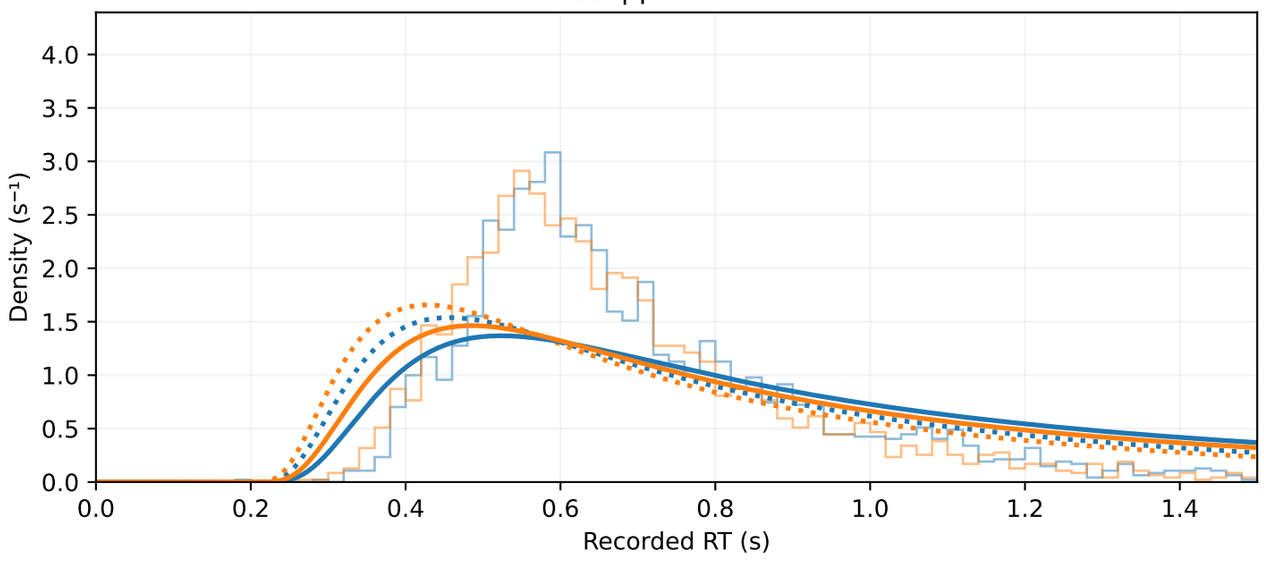
Human reactive-only TIED | testing the 1.5 s cutoff

ASL 20 cd/m² — ASL 40 cd/m² — Refit: RT ≤ 1.5 s — Previous fit, reconditioned — Selected data









Both models evaluated on the same RT ≤ 1.5 s trials, conditional on 0–1.5 s
Arithmetic physical posterior means | previous model was trained on all RTs (0–3 s)
Five shared parameters/group; unchanged priors | posterior uncertainty is a variational approximation
