Does fitting RT shape alone imply plausible choices?

DDM: shared scale, RT only
DDM: shared scale, RT + choice
Data ± binomial SE
TIED: RT + choice
DDM: free scales, RT + choice

Control | ASL 20 cd/m²

Control | ASL 40 cd/m²

ASD | ASL 20 cd/m²

ASD | ASL 40 cd/m²

P(right), conditional on retained RT

Signed ΔdB (right − left)

RT-only model did not use observed choices; drift direction follows the stimulus sign for interpretation.
Condition = RT | 0–1.8 s; all recorded choices retained | delay bound 0–300 ms; causal support below earliest group RT
Raw-trial pooling; actual signed-condition frequencies | densities normalized on 0–1.8 s | MLE diagnostics use no priors
