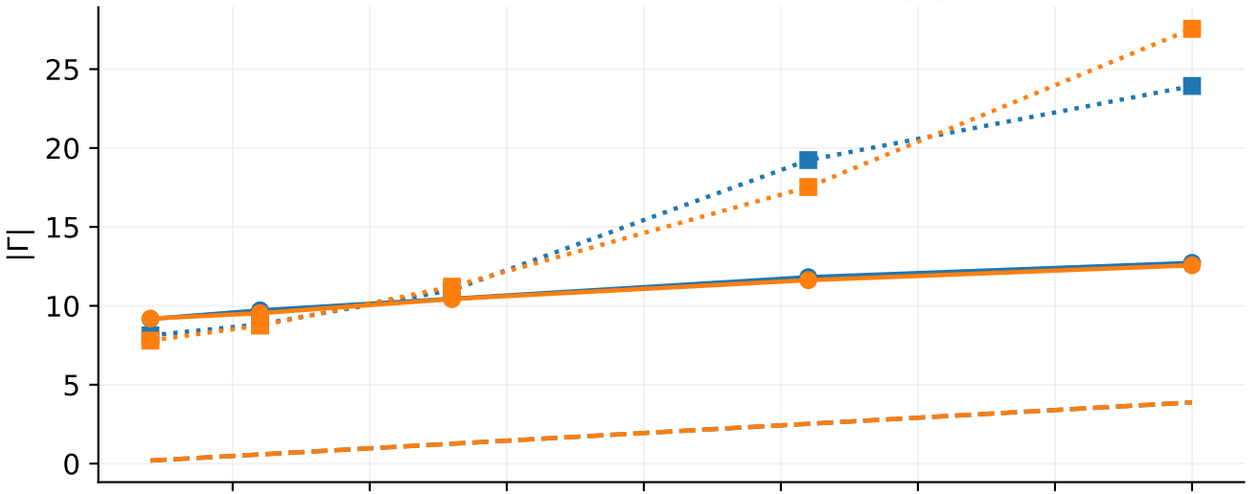
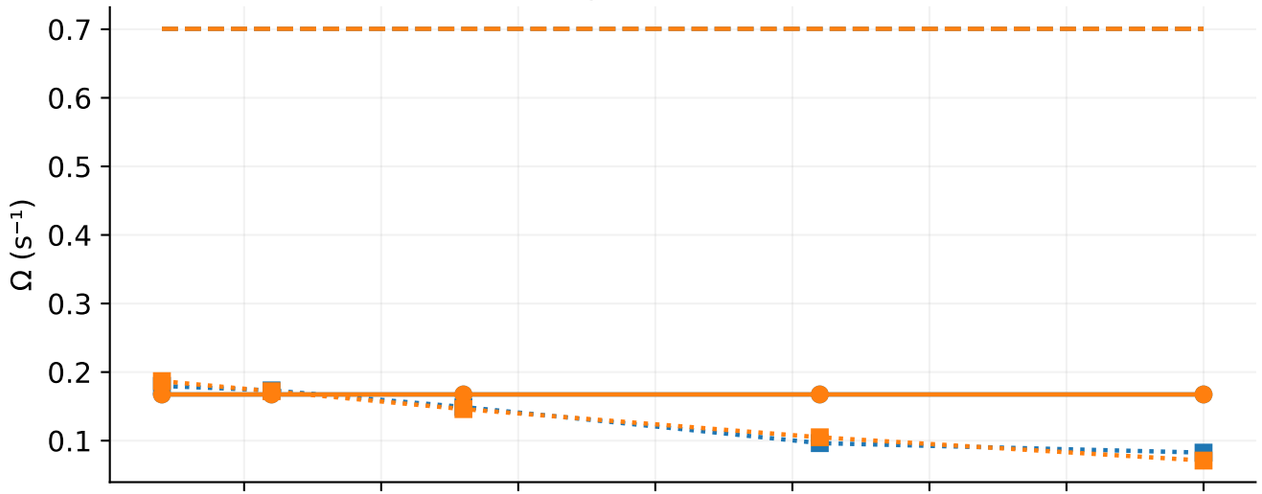
RT shape needs strong drift even at the smallest stimulus differences

ASL 20 cd/m² | ASL 40 cd/m² | TIED: RT-only MLE | Plain DDM: shared scale | Plain DDM: free scales

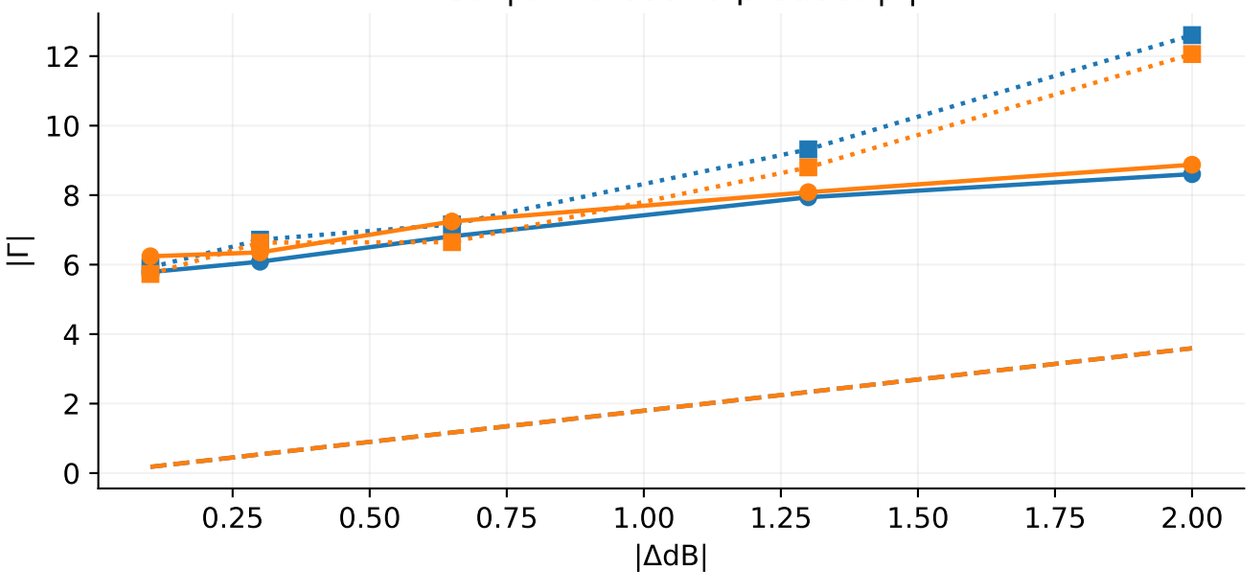
Control | Drift–bound product |Γ|



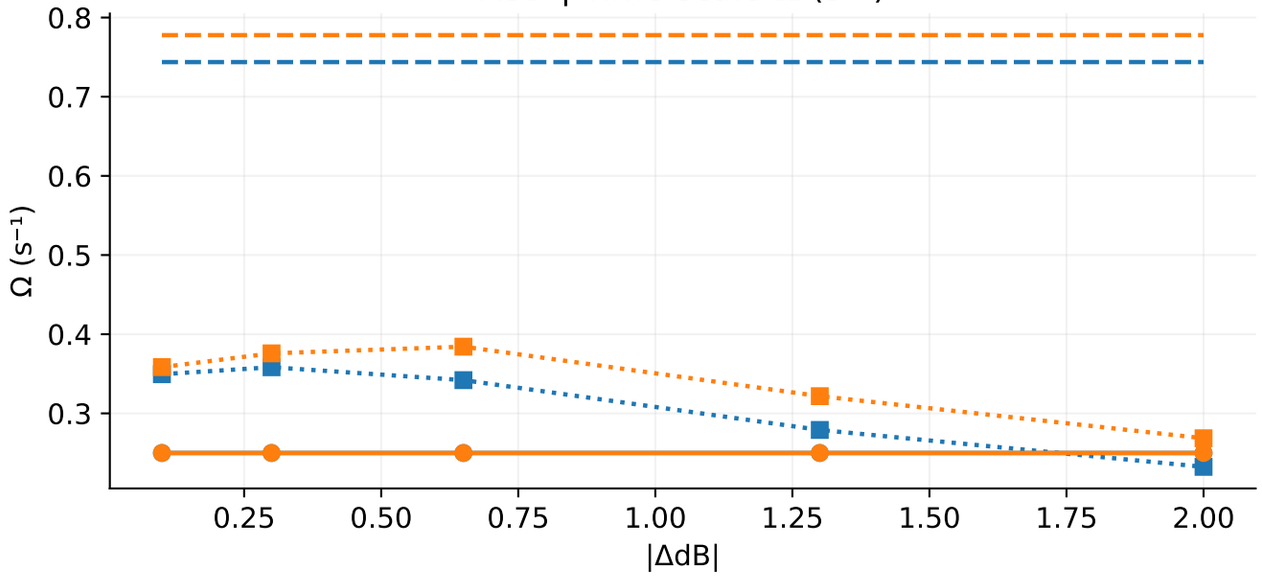
Control | Time scale Ω (s⁻¹)



ASD | Drift–bound product |Γ|



ASD | Time scale Ω (s⁻¹)



Each point averages derived parameters across the two signed conditions; these are not fitted group means.
Condition = RT | 0–1.8 s; all recorded choices retained | delay bound 0–300 ms; causal support below earliest group RT
Raw-trial pooling; actual signed-condition frequencies | densities normalized on 0–1.8 s | MLE diagnostics use no priors
