ABL 60 dB
Density (s⁻¹)
Time (s): sensory delay for NDT; stimulus-relative RT for the two full-model curves
All three curves are model predictions. Proactive timing, exponential lapses and NPL+alpha evidence/readout parameters remain fixed; only the orange curve removes sensory delay.
Each RT curve uses exact parent-onset averages and its own [−1,1] s normalization. NDT is normalized over [0,∞), without RT-window conditioning. Display 0–0.4 s; signed ILDs remain separate.
