
Animal mean = (M20 + M40 + M60) / 3 | Signed delta = M_ABL − animal mean | Gray side bars: mean ±1 population SD (ddof=0)

Valid choices: success in {1,−1}; training 16; no RT restriction; prepared repeat rule already applied; ABL 59 → 60; signed ILDs ±1/2/4/8/16

Each animal and each ABL has equal weight in these summaries. Signed deviations here differ from the earlier mean absolute pairwise ranking scores.
