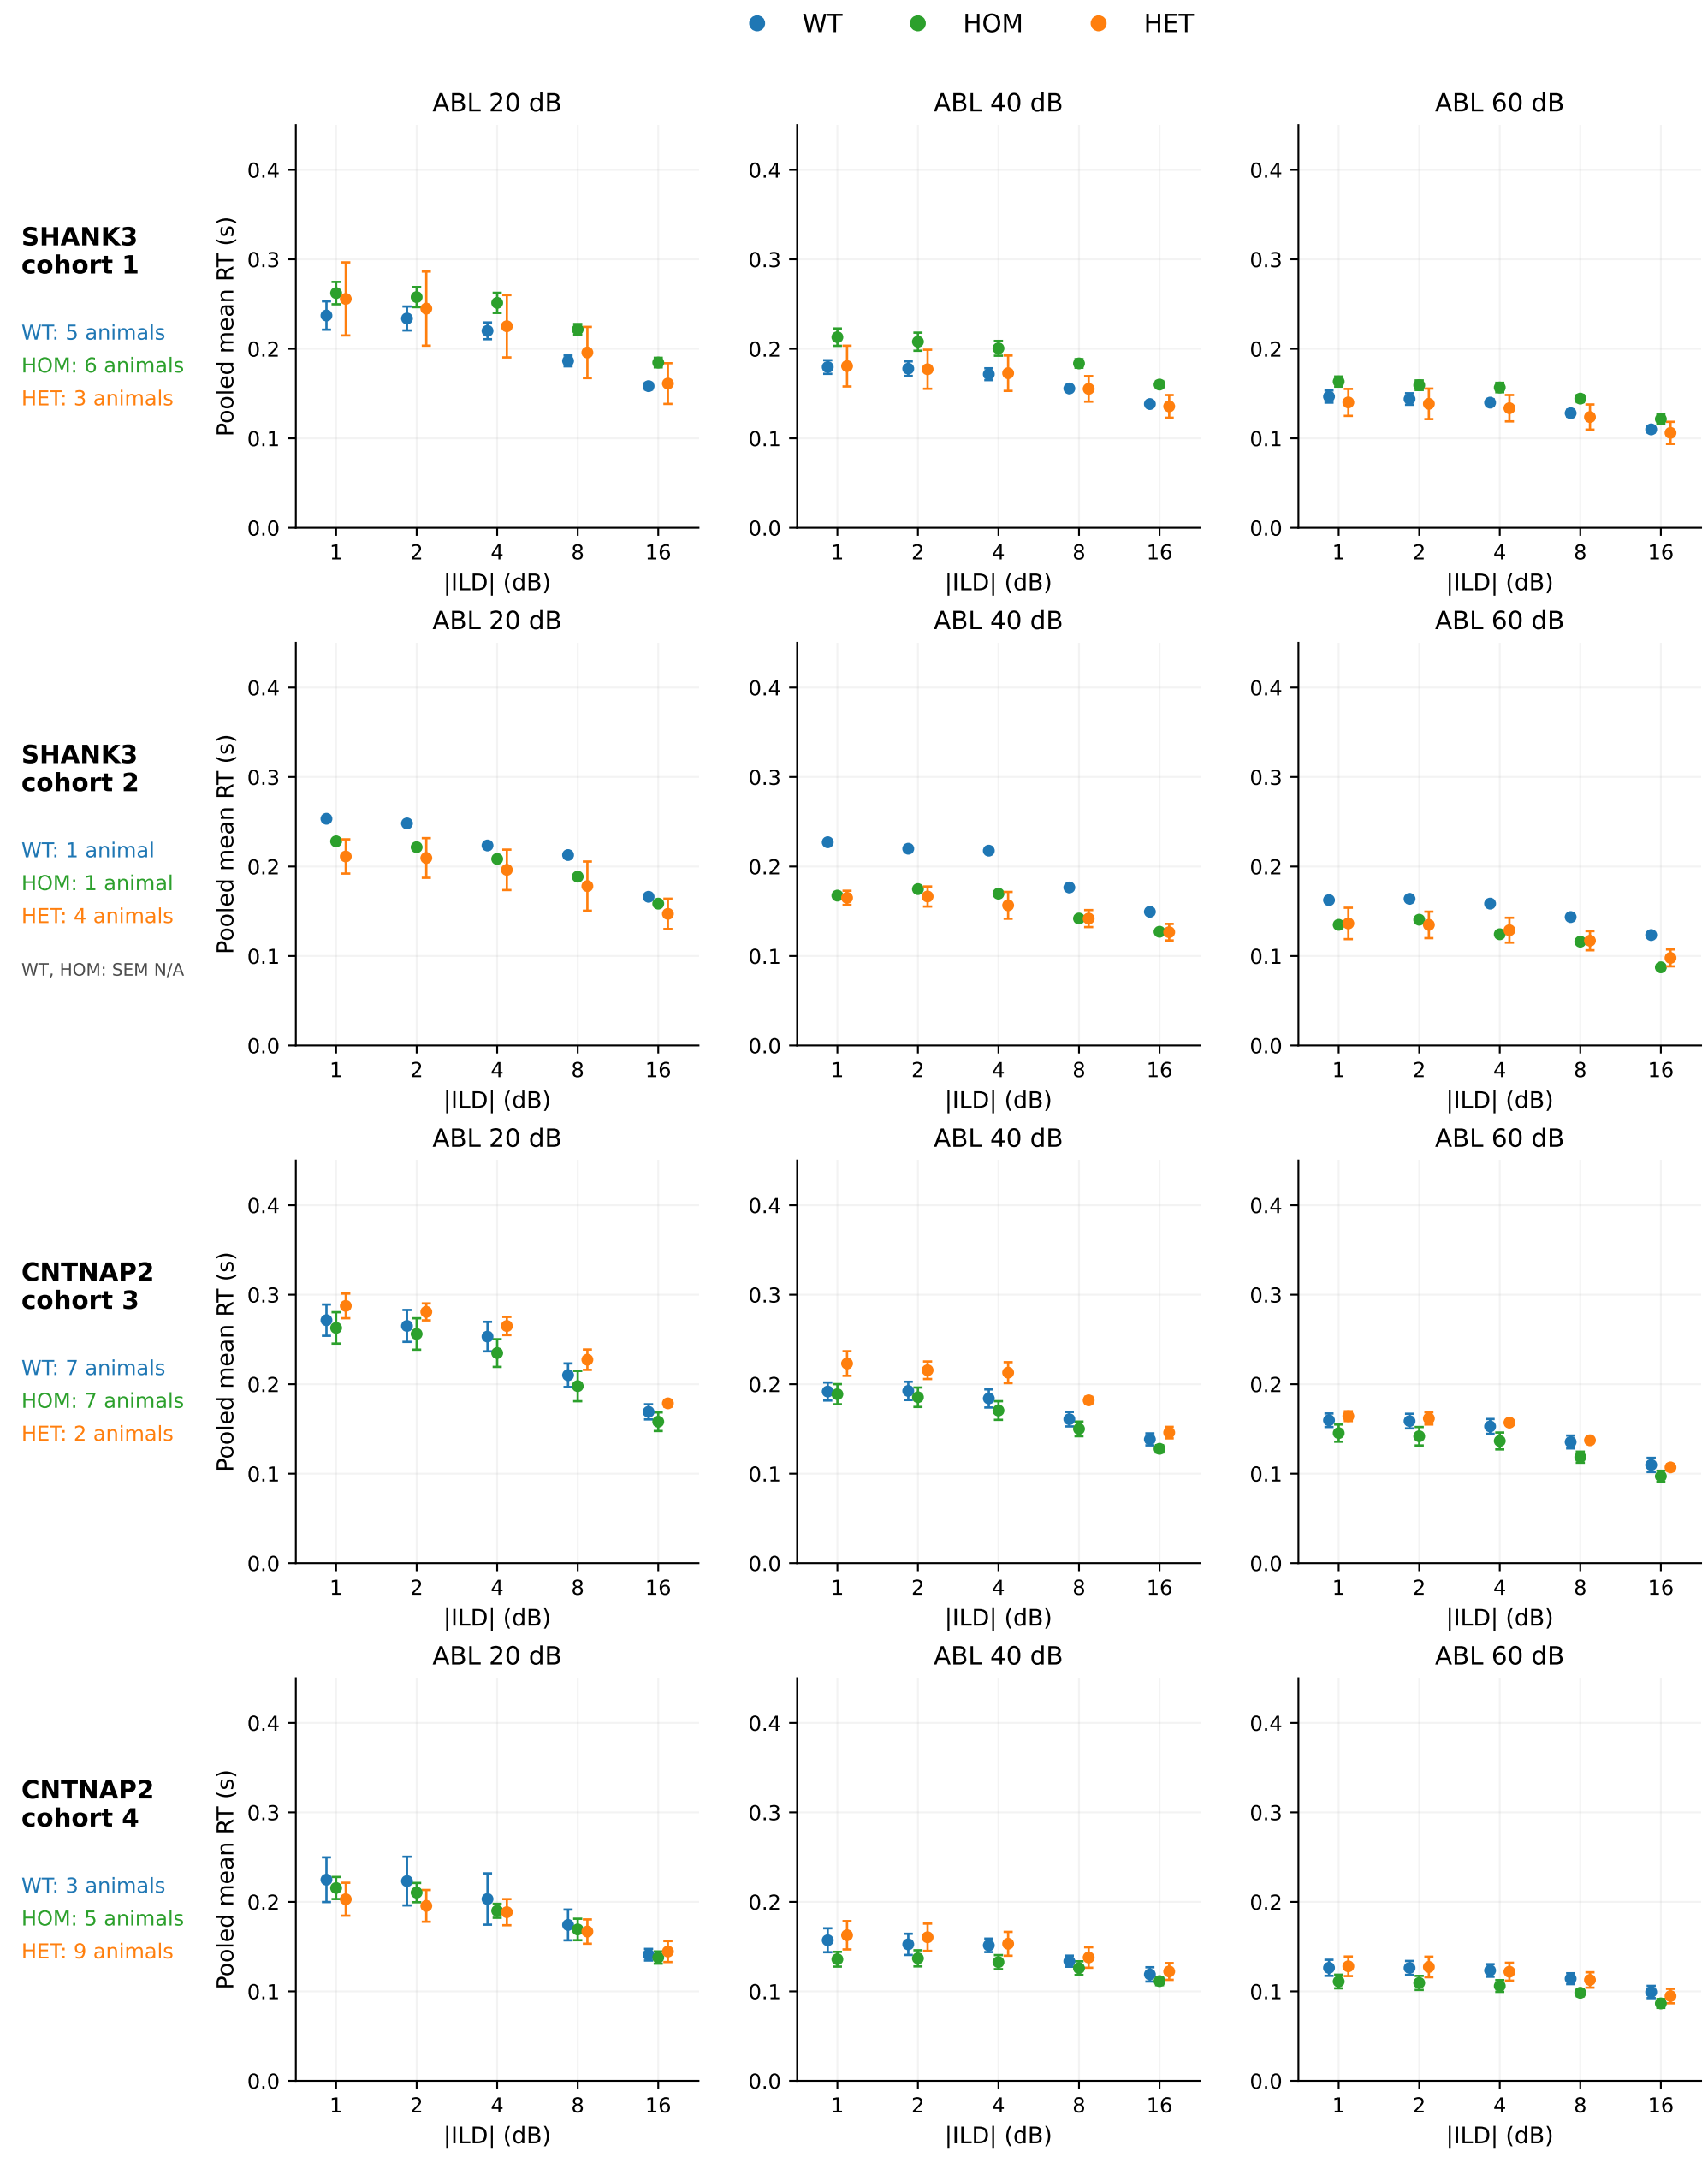
Pooled mean RT; error bars = SEM across animal means

Cohort-level genotype comparison | Valid choices; RT in [0,1] s



Dots: pooled trials. Bars: sample SD(animal condition means) / √animal count. One animal: no SEM bar.

Training 16; success ∈ {1,−1}; RT [0,1] s; ABL 59→60; actual ±ILD trials pooled; prepared repeat/short-sound/calibration rules retained.
