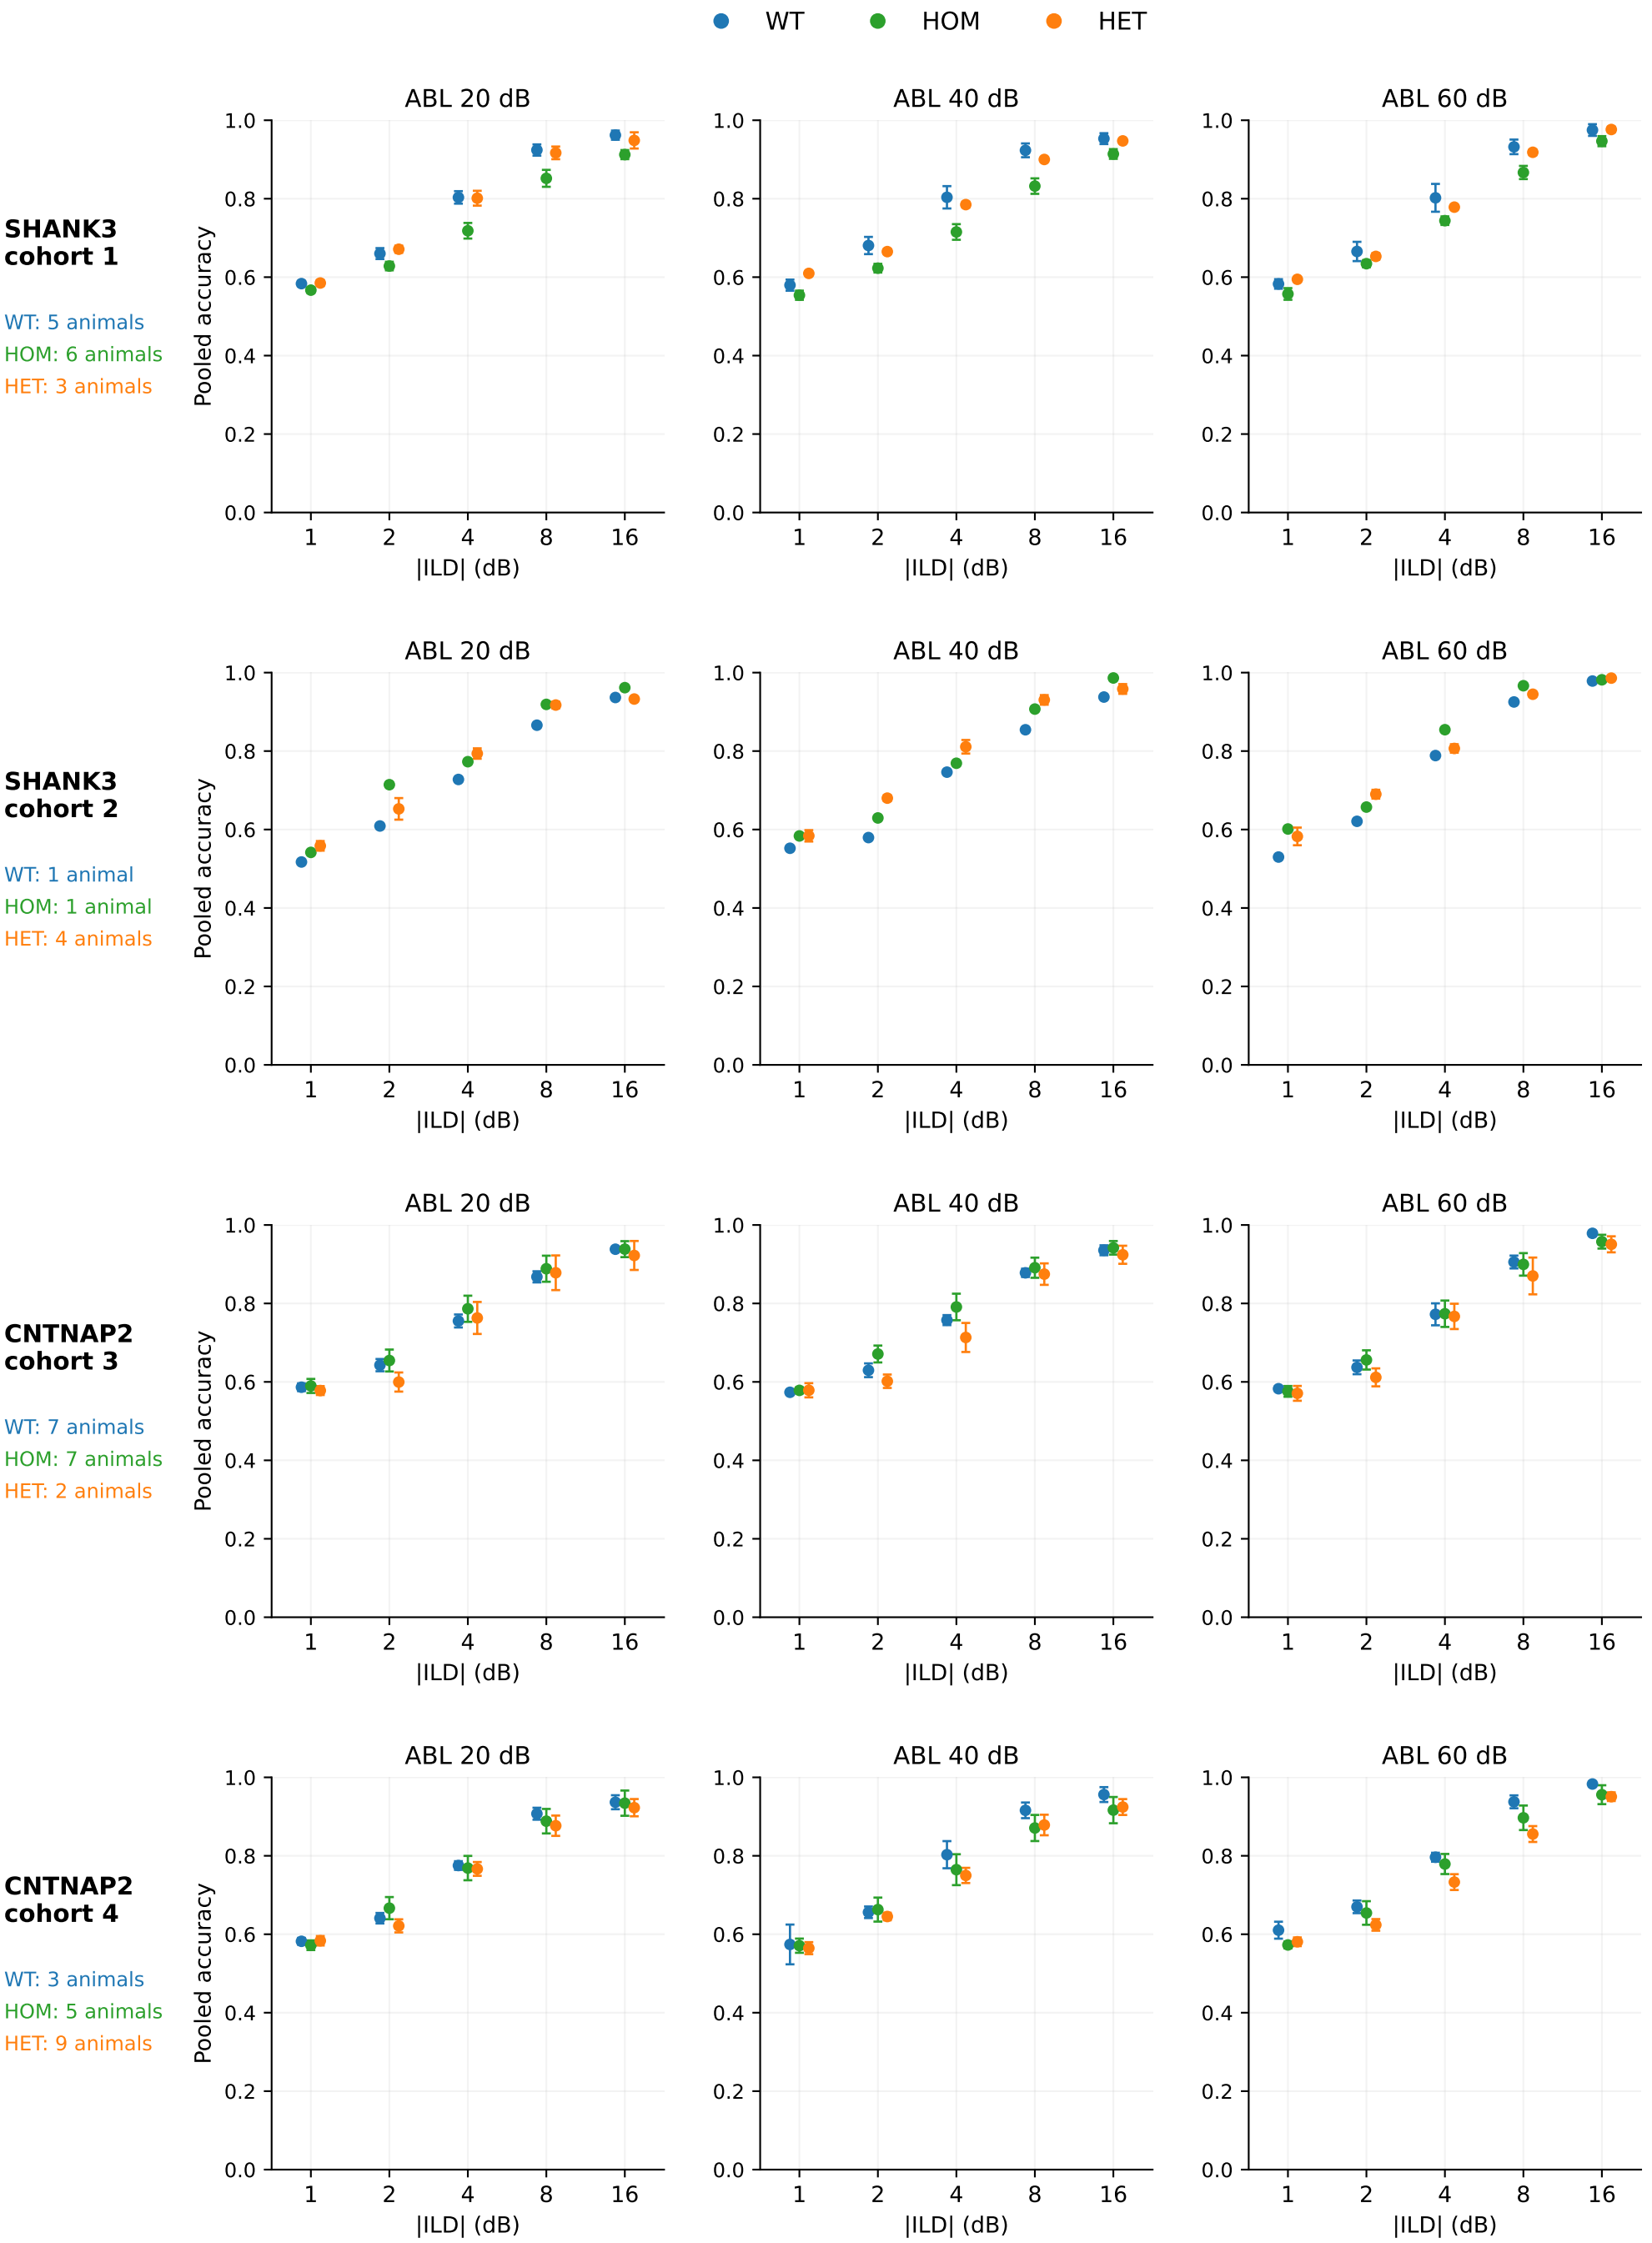
Pooled accuracy; error bars = SEM across animal accuracies

Cohorts | 53 animals | 446,949 valid choices | RT [0,1] s



Dots: pooled correct / valid choices. Bars: sample SD(animal accuracies) / √animal count. Missing SEM: no bar.

Training 16; success ∈ {1,−1}; RT [0,1] s; ABL 59→60; prepared repeat/short-sound/calibration rules retained.
