
Session type 1; training level 16; success in {1,-1}; confirmed repeat rule already applied; all 53 animals retained.
ABL 59 mapped to 60; signed ILDs ±1/2/4/8/16 dB and sessions pooled by observed trials; all finite timed_rt values used, including >1 s.

SEM = sample SD / sqrt(n); bars show one standard error of the mean, with n finite RTs at that animal/ABL.
