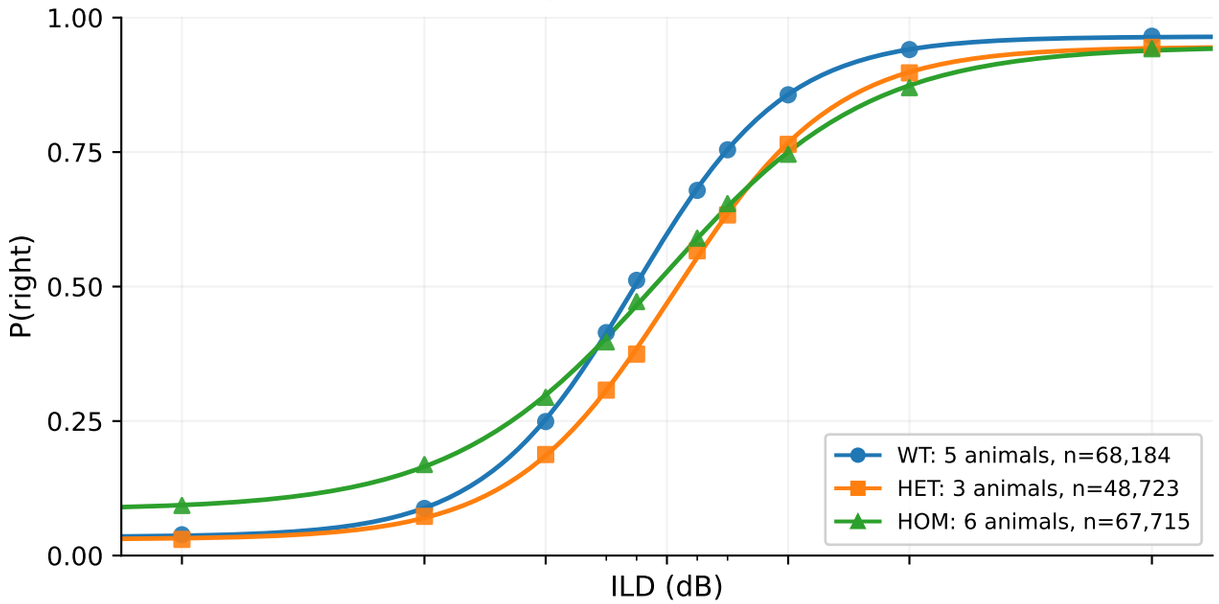
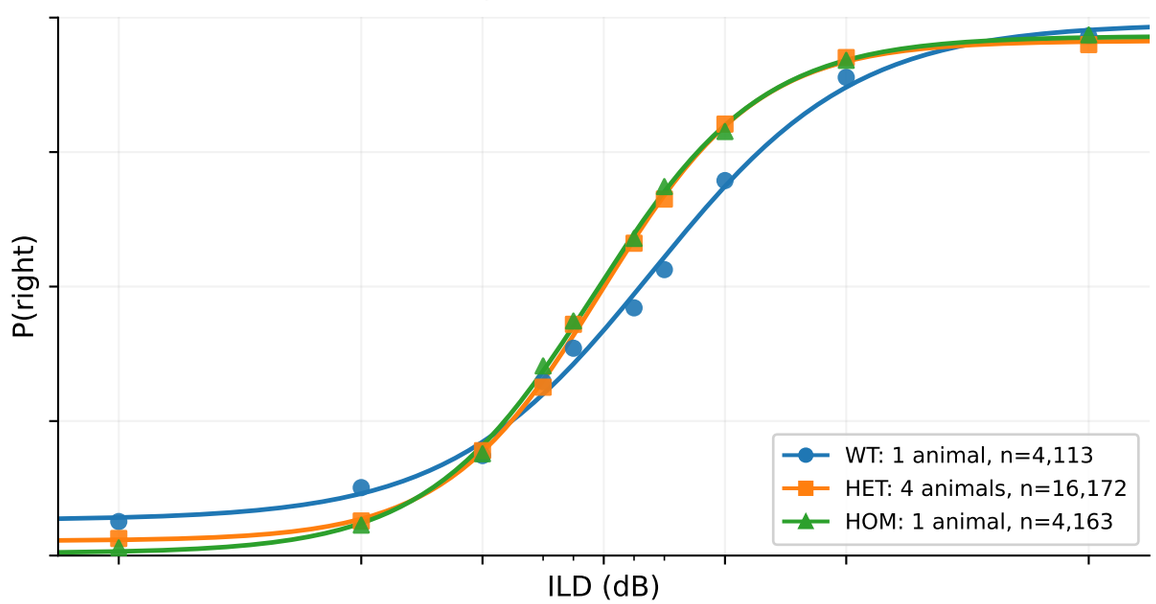
Session type 1 | Genotype psychometrics
Four cohorts separately
Trials pooled across ABLs | measured RT in [0,1] s

WT HET HOM

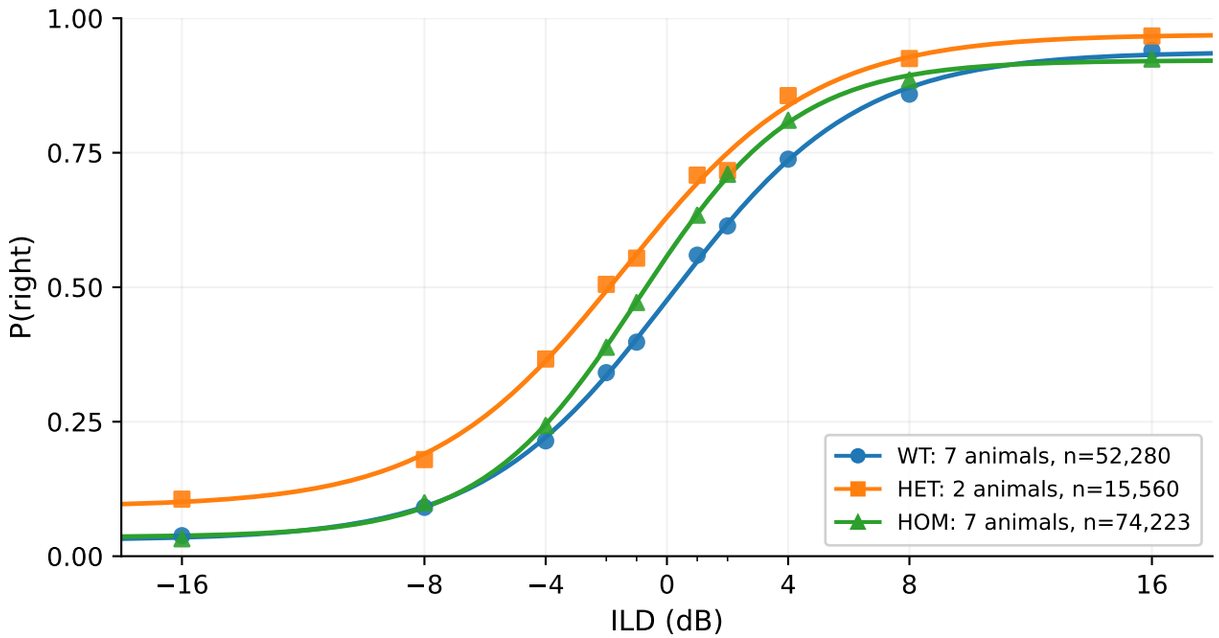
SHANK3_cohort1
14 animals | 184,622 RT-window choices



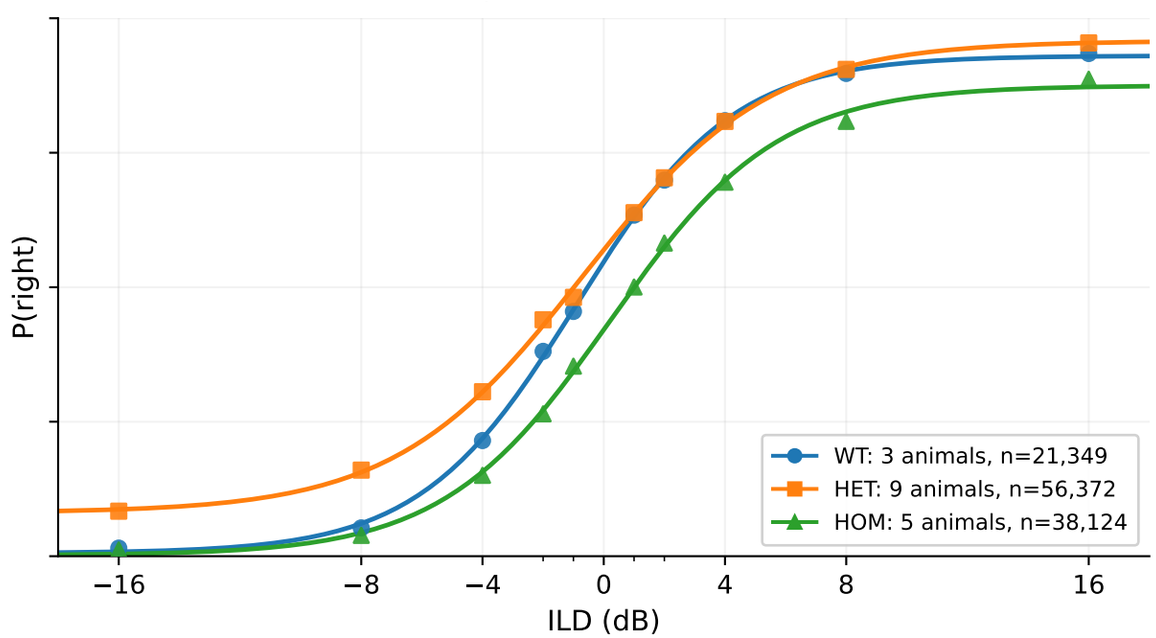
SHANK3_cohort2
6 animals | 24,448 RT-window choices



CNTNAP2_cohort3
16 animals | 142,063 RT-window choices



CNTNAP2_cohort4
17 animals | 115,845 RT-window choices



Training 16; confirmed repeat rule; 807 short-sound rows removed in preparation; all 53 animals retained.
Correct/error choices; finite measured timed_rt in inclusive [0,1] s. ABL 59 → 60; signed ILDs ±1/2/4/8/16.
Pool raw ABL counts at each ILD, then fit ten probabilities equally. Colors identify genotype; n counts RT-window choices.
