
Training 16; confirmed repeat rule; 807 short-sound rows removed in preparation; all 53 animals retained.
Correct/error choices; finite measured timed_rt in inclusive [0,1] s. ABL 59 → 60; signed ILDs ±1/2/4/8/16.
Pool raw ABL counts at each ILD, then fit ten probabilities equally. Colors identify genotype; n counts RT-window choices.
