Session type 1 | Animals with the smallest changes across ABL

ΔM = (|M20 − M40| + |M40 − M60| + |M20 − M60|) / 3 | Rank using unrounded values | ASD0055 appears in both rows

Training 16 | success in {1, −1} | no RT restriction | prepared repeat rule already applied | ABL 59 → 60 | signed ILDs ±1/2/4/8/16

Common set: 50 animals, 444,718 choices | All 53 remain in the CSV | ΔJND and Δk have different units; these rankings describe stability across ABL
