
Session type 1; training 16; confirmed repeat rule; 807 short-sound rows removed during preparation; all 53 animals retained.
Correct/error choices; no RT restriction. ABL 59 → 60; signed ILDs ±1/2/4/8/16. Pool counts before fitting; each ILD probability point has equal fit weight.
Slope = k. JND = half the ILD spacing at y_high = 0.75 × upper and y_low = 0.25 × (1 − lower). Same fit for both metrics; no parameter averages.
